

## Efficient Water Quality Analysis and Prediction using Machine Learning

Empathy Map

## **Build empathy**

release of

contaminants

by factories

What behavior have we observed?

What can we imagine them doing?

Does

The information you add here should be representative of the observations and research you've done about your users.

My generation Supports might get diversity of affected due plants and to its effect in wildlife biodiversity

unsanitary water leads to diseases

and sanitaion for all

Life threat to

aquatic plants

**Ensure** 

access to

clean water

**Thinks** 

To help in

growth of a

healthy

crop

Tap water

will now be

clean and

safe for

drinking

and animals.

contaminated water diseases leads to PTSD and bipolar disorder in children

**Anxieties over the** irresponsible **Government and** fellow citizens for water contamination and negligence

**Feels** 

What are their fears, frustrations, and anxieties? What other feelings might influence their behavior?
